

Translucent Opalescent

Spectrum Glass

 Spectrum Glass
Company

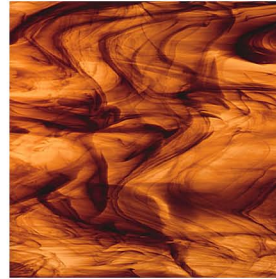

Spectrum's translucent Opal mixes are about 50-50 cathedral clour and white opal glass. The larger proportion of opaque white reduces light transmission and increases surface reflection. Some translucents involve multiple cathedral colours with white and others use coloured opals to achieve their individual character.

Clear/White
307S and I/307S
Code: SP170VC

Iridised by order only
Pale Amber/White
317-02S and I/317-02S
Code: SP211SC
